EXPERIENCE

Software Engineer

Dec 2025 – Feb 2026

Stealth Startup

Remote

- Built a browser SDK capturing real-time page views, clicks, searches, and product-intent signals from client websites
- Designed event pipelines that normalized user activity, stitched sessions, and updated persistent behavioural profiles
- Implemented an inference layer that converted behavioural signals into campaign recommendations and audience attributes

Co-Founder

Jun 2025 – Dec 2025

MerchMe - UGC Creator Marketplace

Toronto, ON

- Co-founded and built a two-sided UGC marketplace for campaigns, submissions, messaging, and payments
- Built full-stack workflows with Next.js, NestJS, Supabase, Redis, and Stripe for matching, campaigns, and payouts
- Grew the marketplace to 100+ users and 5 active brands

Founding Engineer

Apr 2025 – Oct 2025

Clover Labs

Toronto, ON

- Built Playwright scraping pipelines across social platforms to collect and analyze high-performing short-form content
- Extracted recurring hooks, formats, engagement patterns, and distribution signals to inform growth experiments
- Automated content experiments to test viral hooks, formats, and distribution strategies

Software Engineer Intern (4 Internships)

May 2022 – Apr 2024

TD Bank - 4 Engineering Teams

Toronto, ON

- Built production automation pipelines increasing mortgage lead intake by 50+ qualified leads per day
- Designed and shipped an internal UI SDK powering design system adoption across TD development teams
- Delivered a production teller dashboard replacing legacy in-branch systems

Software Engineer Intern

Sep 2023 – Dec 2023

Thales - Digital Identity & Security

Burlington, ON

- Built inventory automation across 20+ global facilities, saving \$100K+ in costs

Software Engineer Intern

Jun 2021 – Sep 2021

Taplytics (YC W14 / DevCycle)

Toronto, ON

- Built experiment-driven web surfaces supporting growth and acquisition funnels

PROJECTS

Xpo - AI Growth Tool for X

GitHub Repo

- Shipped a full-stack AI product with account analysis, voice-aware drafting, billing, and browser extension APIs
- Built a companion extension that inspected visible X posts, ranked reply opportunities, and generated context-aware replies
- Designed inference pipelines to learn a creator's voice from source material, previous posts, and account positioning

CreatorGraph - Creator Discovery and Brand Fit Engine

GitHub Repo

- Built a brand-side creator discovery pipeline that analyzed websites, scraped public creator profiles, and extracted niche signals
- Used Google search operators, Playwright crawling workers, and BullMQ to ingest creators from unstructured web sources
- Ranked creators with explainable compatibility scores using brand niche, platform fit, engagement, and content signals

ENSight - Wallet Safety Browser Extension

GitHub Repo

- Built a Chrome extension runtime that observed high-signal Ethereum wallet requests before users signed transactions
- Implemented page-context injection to monitor blockchain provider calls without mutating requests or touching private keys
- Structured wallet interactions into semantic intent events for background-worker enrichment and UI-ready risk context

SKILLS

Languages: TypeScript, Python, Java, SQL

Frontend: React, Next.js, Tailwind, Chrome Extensions

Backend & Systems: Node.js, NestJS, REST APIs, BullMQ, event-driven systems, microservices

Data: PostgreSQL, Redis, Supabase

Automation: Playwright, browser automation, web scraping

Infrastructure: Docker, Vercel, Railway, Cloudflare

EDUCATION

Sheridan College

2026

Software Development and Network Engineering, Advanced Diploma

Oakville, ON
